SLOS098D - AUGUST 1991 - REVISED MAY 1998

- 1/2 V<sub>I</sub> Virtual Ground for Analog Systems
- Self-Contained 3-terminal TO-226AA Package
- Micropower Operation . . . 170 μA Typ,
   V<sub>I</sub> = 5 V
- Wide V<sub>I</sub> Range . . . 4 V to 40 V
- High Output-Current Capability
  - Source . . . 20 mA Typ
  - Sink . . . 20 mA Typ

#### description

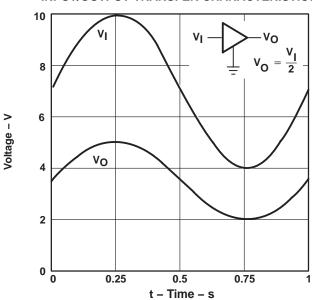

In signal-conditioning applications utilizing a single power source, a reference voltage equal to one-half the supply voltage is required for termination of all analog signal grounds. Texas Instruments presents a precision virtual ground whose output voltage is always equal to one-half the input voltage, the TLE2426 "rail splitter."

The unique combination of a high-performance, micropower operational amplifier and a precision-trimmed divider on a single silicon chip results in a precise  $V_{\text{O}}/V_{\text{I}}$  ratio of 0.5 while sinking and sourcing current. The TLE2426 provides a low-impedance output with 20 mA of sink and source capability while drawing less than 280  $\mu\text{A}$ 

Excellent Output Regulation

- $-45 \,\mu\text{V}$  Typ at  $I_{O} = 0$  to  $-10 \,\text{mA}$
- $+15 \mu V$  Typ at  $I_0 = 0$  to +10 mA
- Low-Impedance Output . . . 0.0075 Ω Typ
- Noise Reduction Pin (D, JG, and P Packages Only)

#### **INPUT/OUTPUT TRANSFER CHARACTERISTICS**

of supply current over the full input range of 4 V to 40 V. A designer need not pay the price in terms of board space for a conventional signal ground consisting of resistors, capacitors, operational amplifiers, and voltage references. The performance and precision of the TLE2426 is available in an easy-to-use, space saving, 3-terminal LP package. For increased performance, the optional 8-pin packages provide a noise-reduction pin. With the addition of an external capacitor  $(C_{NR})$ , peak-to-peak noise is reduced while line ripple rejection is improved.

Initial output tolerance for a single 5-V or 12-V system is better than 1% with 3.6% over the full 40-V input range. Ripple rejection exceeds 12 bits of accuracy. Whether the application is for a data acquisition front end, analog signal termination, or simply a precision voltage reference, the TLE2426 eliminates a major source of system error.

#### **AVAILABLE OPTIONS**

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

## TLE2426, TLE2426Y THE "RAIL SPLITTER" PRECISION VIRTUAL GROUND SLOS098D - AUGUST 1991 - REVISED MAY 1998

| -40°C to 85°C  | TLE2426ID | _          | TLE2426ILP | TLE2426IP | TLE2426Y |
|----------------|-----------|------------|------------|-----------|----------|
| -55°C to 125°C | TLE2426MD | TLE2426MJG | TLE2426MLP | TLE2426MP |          |

The D and LP packages are available taped and reeled in the commercial temperature range only. Add R suffix to the device type (e. g., TLC2426CDR). Chips are tested at 25°C.

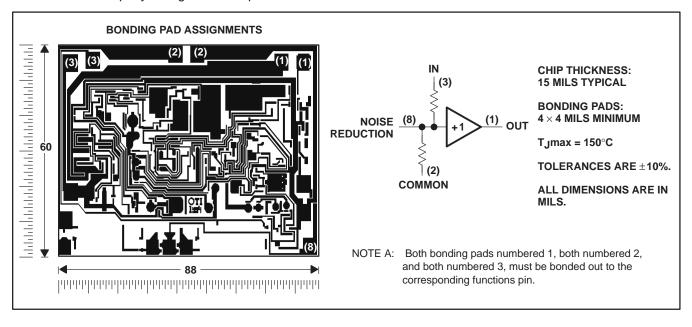

#### description (continued)

The C-suffix devices are characterized for operation from  $0^{\circ}$ C to  $70^{\circ}$ C. The I suffix devices are characterized for operation from  $-40^{\circ}$ C to  $85^{\circ}$ C. The M suffix devices are characterized over the full military temperature range of  $-55^{\circ}$ C to  $125^{\circ}$ C.

#### **TLE2426Y chip information**

This chip, properly assembled, displays characteristics similar to the TLE2426C. Thermal compression or ultrasonic bonding may be used on the doped aluminum bonding pads. The chips may be mounted with conductive epoxy or a gold-silicon preform.

#### PACKAGE OPTION ADDENDUM

6-Feb-2020

| Orderable Device | Status | Package Type | Package | Pins | _   | Eco Plan                   | Lead/Ball Finish | MSL Peak Temp      | Op Temp (°C) | Device Marking | Samples |
|------------------|--------|--------------|---------|------|-----|----------------------------|------------------|--------------------|--------------|----------------|---------|
|                  | (1)    |              | Drawing |      | Qty | (2)                        | (6)              | (3)                |              | (4/5)          |         |
| TLE2426MDG4      | ACTIVE | SOIC         | D       | 8    | 75  | Green (RoHS<br>& no Sb/Br) | NIPDAU           | Level-1-260C-UNLIM | -55 to 125   | 2426M          | Samples |

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

#### OTHER QUALIFIED VERSIONS OF TLE2426:

Automotive: TLE2426-Q1

#### **PACKAGE OPTION ADDENDUM**

SMALL OUTLINE INTEGRATED CIRCUIT

#### NOTES:

- 1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- 2. This drawing is subject to change without notice.
- 3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
- 4. This dimension does not include interlead flash.
- 5. Reference JEDEC registration MS-012, variation AA.

SMALL OUTLINE INTEGRATED CIRCUIT

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SMALL OUTLINE INTEGRATED CIRCUIT

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.

### P (R-PDIP-T8)

### PLASTIC DUAL-IN-LINE PACKAGE

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. Falls within JEDEC MS-001 variation BA.

Images above are just a representation of the package family, actual package may vary. Refer to the product data sheet for package details.

4040001-2/F

TO-92 - 5.34 mm max height

TO-92

#### NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.
- 3. Lead dimensions are not controlled within this area.4. Reference JEDEC TO-226, variation AA.
- 5. Shipping method:

  - a. Straight lead option available in bulk pack only.
     b. Formed lead option available in tape and reel or ammo pack.
  - c. Specific products can be offered in limited combinations of shipping medium and lead options.
  - d. Consult product folder for more information on available options.
